

Tracking the Impact of the Trump Tariffs & Trade War

May 5, 2026 • 55 min read

By: [Erica York](#), [Alex Durante](#)

Latest Updates

- April 27, 2026**
We updated estimates for the Section 232 tariffs on steel, aluminum, and copper; provided new estimates for Section 232 tariffs on pharmaceuticals; and updated the applied rate time series to reflect more detailed steel and aluminum tariff modeling.
- March 13, 2026**
We added a distribution table for Section 122 tariff, revenue for de minimis, and timelines on new Section 301 investigations.
- February 24, 2026**
The Section 122 tariffs took effect at 10 percent, not the threatened 15 percent.

Impact of Trump Tariffs by the Numbers

President Trump's Imposed and Threatened Tariffs, Topline Preliminary Estimates

Average Tax Increase per US Household in 2026	10-Year Conventional Revenue, 2026-2035 (Billions)	Gross Domestic Product (GDP)	Capital Stock	Hours Worked Converted to Full-Time Equivalent Jobs
\$700	\$957.8	-0.3%	-0.3%	-254,000

Source: Tax Foundation General Equilibrium Model, February 2026

[Embed](#) • [Download image](#) • [Get the data](#)

Key Findings

- In 2025, the Trump tariffs amounted to an average tax increase of \$1,000 per US household. We estimate the new Section 122 and Section 232 tariffs will increase the average tax increase to \$700 per US household by 2026.

Taxes are complicated. Our analysis isn't. X

[Sign Up](#)

- President Trump imposed tariffs on nearly all trading partners under the International Emergency Economic Powers Act (IEEPA) and on several sectors using Section 232. On February 20, 2026, the Supreme Court ruled 6-3 that IEEPA does not authorize tariffs, leaving only the new Section 232 tariffs in place. Trump responded by imposing a 10 percent tariff on nearly all countries under Section 122, effective February 24, 2026, applying to an estimated \$1.2 trillion (34 percent) of annual imports. The Section 122 tariff is scheduled to expire after 150 days, and several new Section 301 investigations are ongoing.
- The IEEPA ruling reduced the weighted average applied tariff rate on all imports from 14.9 percent to 8.2 percent in 2026 under the remaining Section 232 tariffs. The revised Section 232 tariffs on steel, aluminum, and copper; the new tariffs on pharmaceuticals; and the Section 122 tariff increase this rate to 11.7 percent.
- The average effective tariff rate was in 2025—the highest since 1947. If the 10 percent Section 122 tariffs expire on schedule, we estimate the average effective tariff rate will be 5.7 percent for calendar year 2026, the highest since 1972.
- We estimate that the Section 232 and Section 122 tariffs will raise \$956 billion in revenue from 2026-2035 on a conventional basis. The permanent Section 232 tariffs will reduce long-run US GDP by 0.3 percent before foreign retaliation. Accounting for negative economic effects, the revenue raised by the tariffs falls to \$697 billion over the decade. We estimate that the Section 232 tariffs raised \$38 billion in net tax revenue in 2025.
- The tariffs have not meaningfully altered the trade balance, which fell by only \$2.1 billion in 2025, driven by an increase in the trade surplus of services.

Average Tariff Rates

The new tariffs will significantly raise the tariff rates the US applies to most imports. The weighted average tariff rate measures the statutory tax rate that applies to US imports. It differs from the average effective tariff rate that measures actual customs duties collections as a share of actual goods imports.

According to the World Bank, the weighted average applied tariff was 1.5 percent in 2022. Prior to the Supreme Court's *Learning Resources* decision, we estimate US imports faced a weighted-average applied tariff rate of 15.2 percent. While the 10 percent Section 122 tariffs are in effect, we estimate the applied rate is 11.7 percent, and that it will fall to 8.5 percent after the Section 122 tariffs expire.

Trump's Tariffs Dramatically Raise Applied Tariff Rates

Trade-Weighted Average Applied Tariff Rate in 2022 and Tax Foundation Estimates of Applied Tariff Rates Under Trump's Proposals

Note: The weighted average applied tariff rate measures the statutory tax rate imposed on different products from different countries, and it differs from average effective rates measured by actual tariff revenues as a share of total goods imports.

Since the beginning of President Trump's second term, US tariff policy has changed more than 50 times. The applied tariff rate peaked in April 2025, shortly after the "Liberation Day" tariffs, and has fluctuated significantly since then.

US Tariffs Have Changed More Than 50 Times Under Trump

Weighted Average Applied Tariff Rate on 2024 US Import Mix

Note: Chart includes major changes in tariff policy between February 2025 and February 2026. Weighted average applied tariff rate is based on 2024 import mix with adjustments for USMCA compliance.

We estimate the average *effective* tariff rate by taking tariff revenues as a share of total goods imports. Based on actual customs duties collections and import levels in 2025, the actual average effective tariff rate increased to 7.7 percent, up from 2.4 percent in 2024, reaching its highest level since 1947. If the 10 percent Section 122 tariffs end after 150 days, we estimate the average effective tariff rate for 2026 will be 5.3 percent—the highest since 1972.

Trump's Tariffs Have Dramatically Raised Effective Tariff Rates

Average Effective Tariff Rate on All Goods Imports in 2024 and 2025, Tax Foundation Estimates of Average Effective Tariff Rate on All Goods Imports Under Trump's Imposed Tariffs

In calendar year 2025, customs duties raised \$264 billion for the federal government, compared to \$79 billion in calendar year 2024. Total customs duties revenues include pre-existing tariffs, such as those President Trump imposed in his first term. With the IEEPA tariffs being ruled illegal, the approximately \$166 billion of revenue collected by the government related to those tariffs will have to be refunded. The total revenue raised by tariffs will be less than the direct collections, because tariffs mechanically reduce the bases of income and payroll taxes. We estimate the government netted \$38 billion from the new Section 232 tariffs in 2025.

The Balance of Trade

One of President Trump's stated goals of imposing tariffs is to shrink the US trade deficit. However, a country's balance of trade is not solely driven by trade policy, but instead, reflects broader macroeconomic balances between saving and investment and net lending and borrowing with the rest of the world.

In the United States, domestic investment outpaces domestic saving, requiring a capital inflow from the rest of the world to close the gap. The capital inflow represents net lending to the United States from the rest of the world to finance business investment as well as the government's budget deficit. Because tariffs do not directly change the balance between domestic saving and investment, tariffs cannot permanently change the trade balance.

Tariffs Do Not Fundamentally Alter the US Trade Balance

Total, Goods, and Services Trade Balances, Annual, Billions of Dollars

Note: Data are presented on a balance of payments basis.

[Embed](#) • [Download image](#) • [Get the data](#)

The last time the United States ran a trade surplus was in 1975; every year since, the United States has run a trade deficit. That the United States has consistently run trade deficits for decades is not an imminent economic problem. Net imports, another term for a trade deficit, can reflect the strength of the US economy in attracting foreign investment and in serving as a safe, reliable haven for foreign capital. When net imports finance the capital stock, it allows the US to enjoy a higher level of productivity and growth than otherwise would occur.

In 2025, the trade deficit fell by just \$2.1 billion compared to 2024. The reduction in the trade deficit was due to an increase in the trade surplus of services, as the goods deficit actually increased by \$25.5 billion year over year.

Economic Effects

Our estimates below separate the effects of the IEEPA tariffs (rules unlawful) from other tariffs. See the Appendix for a detailed explanation of the modeled provisions.

Because the Section 122 tariff expires after 150 days, it would have no long-run economic impact. We estimate that before accounting for any foreign retaliation, the Section 232 tariffs will reduce long-run US GDP by 0.3 percent.

As of September 1, 2025, threatened and imposed retaliatory tariffs affect \$223 billion of US exports based on 2024 US import values; if fully imposed, we estimate they will reduce long-run US GDP by 0.2 percent.

Table 1. Estimated Economic Impact of 2025 Trump Tariffs

	Long-Run GDP	Capital Stock	Pre-Tax Wages	Hours Worked Converted to Full-Time Equivalent Jobs
Section 232 Tariffs	-0.3%	-0.3%	0.0%	-254,000
Section 232 Steel, Aluminum, Copper	-0.1%	-0.1%	0.0%	-104,000
Section 232 Autos and Auto Parts	-0.1%	-0.1%	0.0%	-98,000

Revenue Impacts

Tariffs generate tax revenue for the federal government. We model the imposed tariffs together, accounting for interactions between the different rounds of tariffs and timing of implementation. Additionally, we account for income and payroll tax offsets, as tariffs mechanically reduce those tax bases. For this reason, the total tax revenue raised on net will be less than the tariff revenue reported by Treasury.

The revenue generated by tariffs is lower on a dynamic basis, reflecting the negative effect tariffs have on US economic output, reducing incomes and resulting tax revenues. Revenue would fall more when factoring in foreign retaliation, as retaliation would cause US output and incomes to shrink further.

On a conventional basis, before incorporating negative economic effects, we estimate that the Section 232 tariffs will increase US federal tax revenue by \$932 billion from 2026 through 2035. The temporary 10 percent Section 122 tariffs will raise \$24 billion in 2026, .

On a dynamic basis, incorporating the negative effects of the US-imposed tariffs on the US economy, we estimate that the Section 232 and temporary Section 122 tariffs will raise \$697 billion from 2026 through 2035, about \$259 billion less than the conventional estimate. Incorporating the negative effects of imposed retaliatory tariffs as of September 1, 2025, further reduces 10-year revenue by \$136 billion.

Table 2. Conventional Revenue Effects of 2025 Trump Tariffs

Calendar Year	2026	2027	2028	2029	2030	2031	2032	2033	2034	2

Chart: Erica York • [Embed](#) • [Download image](#) • [Get the data](#)

Distributional Impacts

In 2026, the tariffs will reduce after-tax incomes for all income groups. The top 1 percent will see a smaller reduction in after-tax income compared to others.

In 2025, per US household, the IEEPA and Section 232 tariffs altogether amounted to an average tax increase of \$1,000. However, with the IEEPA tariffs struck down and not yet fully replaced, the tax increases in 2026 will be smaller. We estimate the Section 232 tariffs will create an average tax burden of \$600, and the temporary Section 122 tariffs will increase it to \$700 for 2026.

These averages do not capture additional costs from higher-priced alternatives and reduced consumer choice.

Table 4. Distributional Effects of 2025 Trump Tariffs

	Percent Change in After-Tax Income under Imposed Tariffs, 2026		Nominal Tax Change, 2026	
Market Income Percentile	Section 232 Tariffs	Section 122 Tariff	Section 232 Tariffs	Section 122 Tariff
0% - 20.0%	-0.5%	-0.2%	\$50	\$16
20.0% - 40.0%	-0.5%	-0.2%	\$137	\$43
40.0% - 60.0%	-0.5%	-0.2%	\$266	\$84
60.0% - 80.0%	-0.5%	-0.2%	\$471	\$149
80.0% - 100%	-0.5%	-0.1%	\$1,285	\$408
Total	-0.3%			

	Percent Change in After-Tax Income under Imposed Tariffs, 2026		Nominal Tax Change, 2026	
80.0% - 90.0%	-0.5%	-0.2%	\$749	\$238
90.0% - 95.0%	-0.5%	-0.2%	\$1,048	\$333
95.0% - 99.0%	-0.5%	-0.2%	\$1,745	\$553
99.0% - 99.9%	-0.4%	-0.1%	\$4,179	\$1,325
99.9% - 100%	-0.3%	-0.1%	\$22,165	\$7,031
Total	-0.3%			

Note: Market income includes adjusted gross income (AGI) plus 1) tax-exempt interest, 2) non-taxable Social Security income, 3) the employer share of payroll taxes, 4) imputed corporate tax liability, 5) employer-sponsored health insurance and other fringe benefits, 6) taxpayers’ imputed contributions to defined-contribution pension plans. Market income levels are adjusted for the number of exemptions reported on each return to make tax units more comparable. After-tax income is market income less: individual income tax, corporate income tax, payroll taxes, estate and gift tax, custom duties, and excise taxes. The 2026 income break points by percentile are: 20%-\$17,735; 40%-\$38,572; 60%-\$73,905; 80%-\$130,661; 90%-\$188,849; 95%-\$266,968; 99%-\$611,194. Tax units with negative market income and non-filers are excluded from the percentile groups but included in the totals.

Timeline of Activity

April 27, 2026

We updated estimates for the Section 232 tariffs on steel, aluminum, and copper; provided new estimates for Section 232 tariffs on pharmaceuticals; and updated the applied rate time series to reflect more detailed steel and aluminum tariff modeling.

March 13, 2026

We added a distribution table for Section 122 tariff, revenue for de minimis, and timelines on new Section 301 investigations.

February 24, 2026

The Section 122 tariffs took effect at 10 percent, not the threatened 15 percent.

February 23, 2026

Includes estimates of the new Section 122 tariff of 10 percent that applies to all countries and the increase of the Section 122 tariffs to 15 percent.

February 20, 2026

The Supreme Court ruled the President cannot impose tariffs under IEEPA. Added average tariff rate for 2025, section on the trade deficit for 2025, and new estimates reflecting the recent Supreme Court ruling the IEEPA tariffs illegal.

February 6, 2026

Economic and revenue estimates were updated to account for lower tariff rates on India, and the tariff timeline was updated with new threats on Canada and Mexico. New distributional details were added as well.

January 23, 2026

Updated Revenue estimates for 2035 were added, moving the tracker into the next 10-year revenue baseline. We updated economic and revenue estimates to account for lower tariff rates on Taiwan (from 20 percent to 15 percent) and certain South Korea Section 232 covered imports. Revenue estimates for Canada and Mexico were adjusted based on the latest trade data for USMCA imports. We also updated the timeline section for new proclamations related to the Section 232 investigations into imports of semiconductors and critical minerals.

January 9, 2026

Updated economic and revenue estimates for the tariffs with new adjustments to income and payroll tax offsets.

December 1, 2025

Includes updated estimates to account for new Brazil exemptions on certain food and agricultural products and adjustments to the IEEPA Canada and Mexico estimates to account for higher shares of USMCA-compliant imports. Based on 2024 import shares, 38 percent of imports from Canada and 49 percent of imports from Mexico were brought in under USMCA; more recent data, averaged from April through July of 2025, show USMCA shares had risen to 65 percent for Canada and 57 percent for Mexico.

November 17, 2025

Includes updated estimates to account for new exemptions on certain food and agricultural products, valued at about \$51.5 billion based on 2024 import levels, and a lowering of Switzerland's reciprocal tariff rate from 39 percent to 15 percent.

November 11, 2025

Includes updated estimate for Mexico tariffs to account for pause in tariff increase, incorporates a 10 percent tariff on buses, and adds a new exemptions list for Cambodia.

October 31, 2025

Includes new estimates incorporating the lower IEEPA tariff rate on China, as well as other adjustments to tariff stacking.

October 27, 2025

Includes new estimates for the IEEPA and Section 232 tariffs, including taking the 100 percent tariff on China off the table, adding another 10 percent tariff on Canada, and placing Section 232 tariffs on heavy trucks. All

estimates now reflect new income and payroll tax offsets to account for the One Big Beautiful Bill Act and refined elasticity effects.

○ **October 17, 2025**

Includes new estimates for the Section 232 tariffs on lumber, furniture, and cabinets, and a new estimate for the additional 100 percent tariff on China.

○ **October 10, 2025**

Includes updated estimates for the reciprocal tariffs to account for new EU exemptions.

○ **October 3, 2025**

Includes updated timeline for new Section 232 tariffs on pharmaceuticals, lumber, heavy trucks, and furniture.

○ **September 26, 2025**

Includes updated Section 232 revenue estimates to account for the reduced rate applied to auto imports from Japan.

○ **September 12, 2025**

Updated estimates for the reciprocal tariffs to account for new exemptions issued on September 5.

○ **September 5, 2025**

Includes updated timeline with US Court of Appeals ruling on IEEPA tariffs, and new estimates for the both the reciprocal tariffs and retaliatory tariffs.

○ **August 22, 2025**

Includes updated timeline with EU trade deal details and new tariffs on steel and aluminum derivatives.

○ **August 15, 2025**

Includes updated revenue and economic estimates for the China reciprocal tariffs due to the extension of the 90-day pause.

○ **August 8, 2025**

Includes updated revenue and economic estimates for the reciprocal tariffs, copper tariffs, and eliminating the de minimis exemption.

○ **August 1, 2025**

Includes updated revenue and economic estimates for the reciprocal tariff revisions released on July 31.

○ **July 29, 2025**

Includes updated revenue and economic estimates for the reciprocal tariffs following new deals with the EU, Japan, and other countries

○ **July 15, 2025**

Includes updated revenue and economic estimates for the reciprocal tariffs and an update on the EU retaliatory tariffs.

○ **July 14, 2025**

Updated revenue and economic estimates for the reciprocal tariffs and the Section 232 copper tariffs.

○ **July 9, 2025**

Includes update to timeline on implementation of reciprocal tariffs, and updated revenue and economic estimates for those tariffs.

○ **July 3, 2025**

Includes updated tariff revenue and economic growth estimates reflecting the US-UK trade deal, and new details for the timeline on the forthcoming US-Vietnam trade deal.

○ **June 17, 2025**

Includes additional chart on monthly customs duties revenues.

○ **June 13, 2025**

Includes details on court case developments, 90-day tariff pause for China trade deal, and a further expansion to steel tariffs.

○ **June 2, 2025**

Includes doubling of Section 232 steel and aluminum tariffs from 25 percent to 50 percent.

○ **May 30, 2025**

Adds to the timeline the injunction issued by the US Court of International Trade that declared the IEEPA tariffs unconstitutional and shows the economic, revenue, and distributional impacts if the decision is upheld.

○ **May 27, 2025**

Includes new chart showing daily deposits of tariff and certain excise tax payments in calendar year 2025 compared to calendar year 2024.

○ **May 27, 2025**

Includes delay for 50 percent "reciprocal" tariffs on all imports from the EU.

○ **May 23, 2025**

Includes 50 percent "reciprocal" tariff on all imports from the EU in economic, revenue, and distributional estimates.

○ **May 12, 2025**

Includes 90-day reduction in tariffs on imports from China in revenue estimates, separates economic and revenue estimates to display 10 percent baseline tariff separately from scheduled increases in tariffs, updates all economic, revenue, and distributional results to the latest version of Tax Foundation's model.

○ **May 9, 2025**

Adds information on the US-UK deal to eventually reduce auto tariffs and steel and aluminum tariffs.

○ **May 5, 2025**

Incorporates new stacking order executive order so that only one of the Section 232 tariffs or IEEPA “fentanyl” tariffs on Canada or Mexico applies.

○ **April 18, 2025**

Includes new exemption for electronics imports from the “reciprocal” tariffs.

○ **April 11, 2025**

New chart on weighted average tariff rates and incorporates China’s higher retaliatory rate on US exports.

○ **April 10, 2025**

Includes the 90-day pause of escalating the so-called reciprocal tariffs that apply to nearly all US trading partners and the increase to 125 percent reciprocal tariffs on China.

○ **April 9, 2025**

Update: Includes the additional 50 percent tariff on all imports from China.

○ **April 4, 2025**

Update: Includes new retaliatory tariffs announced by China and Canada.

○ **April 3, 2025**

Reflects exemption list published on April 3 for the April 2 universal tariffs.

○ **April 3, 2025**

Update reflects President Trump’s new April 2 tariffs related to a national economic emergency on 60 trading partners at specific rates, other trading partners at 10 percent, and non-USMCA Canada and Mexico imports at a 12 percent rate after IEEPA fentanyl tariffs end, and updated auto, steel, and aluminum tariffs.

○ **April 1, 2025**

Timeline includes new details on Section 232 auto and auto part tariffs and modeling includes new tariffs on auto imports and on Venezuela and trading partners that import oil from Venezuela.

○ **March 25, 2025**

Updated timeline to add new “secondary” tariff threat on imports from Venezuela and countries that purchase oil or gas from Venezuela.

○ **March 21, 2025**

Updated timeline for EU retaliation against US Section 232 tariffs.

○ **March 12, 2025**

Update: New revenue and economic estimates for changes to IEEPA tariffs and implementation of Section 232 steel and aluminum tariffs.

○ **March 7, 2025**

Updates timeline for Canada, Mexico, and China tariffs. Tax Foundation is in the process of updating economic and revenue estimates for these developments.

○ **March 4, 2025**

President Trump imposed new tariffs on three of the country's largest trading partners: Canada, Mexico, and China.

○ **March 3, 2025**

Added threatened lumber and agricultural tariffs to timeline.

○ **February 27, 2025**

New estimates for the proposed 25 percent tariff on EU imports and the increase in tariff rates on China. The update also incorporates the latest version of Tax Foundation's General Equilibrium Model and updates to our tariff modeling to reflect the latest tax and economic data and a refinement to our tariff noncompliance assumption.

○ **February 19, 2025**

Updated to include details around the 2025 trade war timeline and provide analysis of Trump's auto, steel, and aluminum tariffs.

○ **February 13, 2025**

Updated to include analysis of Trump's expanded steel and aluminum tariffs.

○ **February 11, 2025**

Updated to include new revenue collection data for the Trump-Biden tariffs.

○ **February 10, 2025**

Update: We rearranged the tracker and added an estimate of the value of US exports targeted by China's retaliatory tariffs.

○ **February 6, 2025**

Updated to include the revenue effects of ending duty-free de minimis treatment of imports from China.

○ **February 4, 2025**

Updated to include additional distributional and historical analysis.

○ **February 1, 2025**

Updated to include the 10 percent tariff on Canadian energy resources.

○ **January 31, 2025**

Updated to include additional analysis of the proposed 25 percent tariffs on Canada and Mexico that could begin February 1, 2025.

○ **January 23, 2025**

Updated to separate out 25 percent tariffs on Canada and Mexico given recent threats that these tariffs could begin February 1, 2025.

○ **November 26, 2024**

The update contains modeling of President-elect Trump's proposed 25 percent tariffs on Canada and Mexico and 10 percent tariff on China.

○ **June 26, 2024**

The update adds import data through 2023, new data on tariff collections, and updated model results for imposed, retaliatory, and proposed tariffs. The modeling updates reflect President Biden's tariff increases and former President Trump's tariff proposals. Nicolo Pastrone assisted with the research for this update.

○ **September 19, 2023**

The update adds a new column to the "Imports Affected by U.S. Tariffs" table, reflecting import data for calendar year 2022, data updates for prior years, and tariff-rate quotas that took effect in 2022 for certain steel and aluminum imports.

○ **July 7, 2023**

Tariffs on washing machines expired in February 2023 after an initial three-year period and a two-year extension. The Biden administration provided a two-year suspension of solar panel tariffs for four Southeast Asian nations beginning in 2022. The update adjusts the revenue and economic results for imposed tariffs.

○ **April 1, 2022**

The Biden administration has reached deals to replace steel and aluminum tariffs with tariff rate quotas for the European Union and United Kingdom and steel tariffs with tariff-rate quotas for Japan. The deals also eliminate tariffs on derivative goods from the same jurisdictions and will bring an end to related retaliatory tariffs. The update adjusts revenue and economic estimates for imposed and retaliatory tariffs and adds a new table illustrating how import levels of affected goods have changed since 2017.

○ **October 19, 2021**

Under President Biden, the U.S. will suspend tariffs on aircrafts and other goods from the E.U. under a five-year pause in the ongoing Boeing-Airbus dispute. We have reorganized the layout of the tracker.

○ **September 18, 2020**

U.S. to eliminate tariffs on \$2.5 billion worth of Canadian aluminum that had been imposed on August 16, 2020, to avoid Canadian retaliatory tariffs.

○ **August 13, 2020**

U.S. to reimpose tariffs on \$2.5 billion worth of Canadian aluminum on August 16, 2020, and Canada to impose retaliatory tariffs.

○ **February 14, 2020**

U.S. reduces tariffs on \$120 billion of Chinese goods by half to 7.5% and China reduces tariffs on approximately \$75 billion of US goods in half to 2.5% and 5%.

December 16, 2019

U.S. postpones indefinitely the scheduled tariff of 15% on \$160 billion worth of goods from China and announces plans to decrease the 15% tariff on \$120 billion worth of goods from China to 7.5% (date unknown, will be included in the model when the decrease takes effect). China took corresponding measures and canceled their schedule tariff increase.

December 5, 2019

U.S. concludes Section 301 investigation into France's Digital Services Tax, threatens tariffs on \$2.4 billion French products. Our analysis now includes tariffs on solar panels and washing machines.

October 18, 2019

U.S. imposes 10% and 25% tariffs on \$7.5 billion European Union goods under WTO ruling.

October 15, 2019

U.S. postpones scheduled tariff hike from 25% to 30% on \$250 billion worth of goods from China.

October 3, 2019

U.S. announces 10% and 25% tariffs on \$7.5 billion European Union goods under WTO ruling, with the authority to raise the tariffs to 100%.

September 12, 2019

U.S. delays tariff increase from 25% to 30% on \$250 billion worth of Chinese goods from Oct. 1 until Oct. 15.

August 26, 2019

U.S. announces the 25% tariff on \$250 billion of Chinese goods would increase to 30 percent, effective Oct. 1, after a comment period.

August 23, 2019

China announces additional tariffs on \$75 billion of U.S. imports, from 5-10%, and will resume tariffs on U.S. cars and car parts suspended earlier in 2019. Tariffs to begin Sept. 1 and end Dec. 15. U.S. announces 10% tariff on \$300 billion of Chinese goods to increase to 15%, some beginning Sept. 1, others on Dec. 15.

August 13, 2019

U.S. announces 10% tariff on \$300 billion of Chinese goods would be delayed from Sept. 1 until Dec. 15.

August 1, 2019

U.S. announces 10% tariff on \$300 billion Chinese goods, to be levied on Sept. 1, lowered from the previously announced 25% on \$325 billion.

July 20, 2019

U.S. confirms announced July 5 plans to impose tariffs on all Chinese imports, roughly \$500 billion of goods, modeled as a 10% tariff.

○ **July 5, 2019**

U.S. again threatens additional tariffs on Chinese imports if China further retaliates, increasing threats from levies on \$200 billion and another \$200 billion to \$200 billion and \$300 billion.

○ **June 10, 2019**

U.S. "indefinitely suspended" previously announced tariffs against Mexican products, set to begin at a 5% rate in June and gradually rise to 25%.

○ **May 31, 2019**

U.S. threatens 5% tariff beginning June 10 on \$346.5 billion of imports from Mexico until illegal immigration across the southern border stops. It would rise to 10% on July 1; 15% on Aug. 1; 20% on Sept. 1; and 25% on Oct. 1.

○ **May 22, 2019**

U.S. announces it will lift steel and aluminum tariffs on Canada and Mexico, and those nations will lift their retaliatory tariffs.

○ **May 10, 2019**

U.S. announces it will raise tariffs on \$200 billion of imports from China from 10% to 25%, with threats to impose an additional 25% on \$325 billion of goods.

○ **August 29, 2018**

Tax Foundation separated our automobile tariff estimate to show auto imports from Canada, and made slight estimate adjustments to correct for rounding.

○ **August 16, 2018**

U.S. doubles the tariffs on steel and aluminum imports from Turkey, which responds by doubling its tariffs on 22 U.S. products.

○ **August 8, 2018**

U.S. threatens a 10% tariff on \$200 billion of Chinese goods if China retaliates for the previous 10% tariff, and that would extend to an additional \$200 billion of goods. This would amount to a \$40 billion tax increase.

○ **August 1, 2018**

U.S. considers increasing the proposed 10% tariff to 25% on \$200 billion of Chinese imports. That would be a \$30 billion tax increase.

○ **July 20, 2018**

U.S. reaffirms plans to impose tariffs on all Chinese imports (roughly \$500 billion).

○ **July 13, 2018**

Russia will begin placing tariffs on U.S. goods, worth about \$87.6 million. (Slight adjustments were made to our estimates to correct for rounding.)

○ **July 6, 2018**

U.S. announces readiness to target an additional \$200 billion in Chinese imports, and an additional \$300 billion after that—an increase of \$100 billion from previous threats.

○ **June 28, 2018**

Turkey will begin placing tariffs on U.S. goods, worth about \$266.5 million.
